Unified approach will be key to telco AI success – UKTINDigitalisierung

Telcos aren't AI native yet. UKTIN's latest telco AI research suggests that data fragmentation and a patch-like approach to applying models are some of the remaining hurdles.

Data for good: how Gaia-X is changing the European data landscape

Data is an increasingly important part of all of our lives and with the emergence of Smart Cities and the Internet of Things, the volume of that importance is set to grow. But how can we make sure that data is captured and used in a responsible way that benefits European businesses and citizens alike? The Parliament sat down with Ulrich Ahle, CEO of Gaia-X, to find out.

OVHcloud lanza su zona local en España, un primer paso antes de levantar su propio centro de datos

El nuevo servicio, que se prestará desde el centro de datos de Interxion en Madrid, estará centrado en la oferta de plataforma como servicio. John Gazal reafirma su interés porque OVHcloud construya un CPD propio en España, aunque no será próximamente.

OVHcloud launches its local area in Spain, a first step before building its own data center

The new service, which will be provided from Interxion 's data center in Madrid, will be focused on the platform-as-a-service offering. John Gazal reaffirms his interest in OVHcloud building its own CPD in Spain, although it will not be in the near future.

Fría, sucia y colonialista guerra por los datos. Ahora sí son petróleo

Explotación laboral, abusos de poder, pleitos legales, tensiones geopolíticas… La materia prima del mundo digital de la que se nutre la inteligencia artificial se ha vuelto tan estratégica que ha dado lugar a todo tipo de argucias por parte de gobiernos y empresas. Algunos expertos advierten lo ven como una nueva forma de colonialismo en la que los fuertes explotan a los débiles para reforzar su posición dominante.

Cold, dirty and colonialist war for data. The new oil

Labor exploitation, abuses of power, legal disputes, geopolitical tensions... The raw material of the digital world on which artificial intelligence feeds has become so strategic that it has inspired all sorts of tricks by governments and companies. Some experts warn that they see it as a new form of colonialism in which the strong exploit the weak to strengthen their dominant position.
