Chapter 2: Breakout / Panel sessions

#1 Urban mobility

Moderators: Maximilian Staebler & Simon Odrowski
DLR Institute for AI Safety & Security

- 14:15 – 14:20** Introduction | Maximilian Stäbler
- 14:20 – 14:35** **From IoT to the Economy of Things – Self Sovereign Identity & Decentralized Data Spaces |**
Peter Busch, Robert Bosch Group: Technical Strategy for Mobility
Matthias Buchhorn, Data Space Architect EDC / IDSA / DSBA / GAIA-X (Hub Germany)
- 14:35 – 14:45** **Gaia-X – Mobility Data Spaces and Citizen Data sharing |**
Paul Theyskens, MyData Brussels Hub, IMEC and MaaS Alliance Working Group
Technology & Standard Leader
- 14:45 – 14:55** Q&A
- 14:55 – 15:00** Wrap-up | Maximilian Stäbler

From IoT to the Economy of Things

Self Sovereign Identity & Decentralized Data Spaces

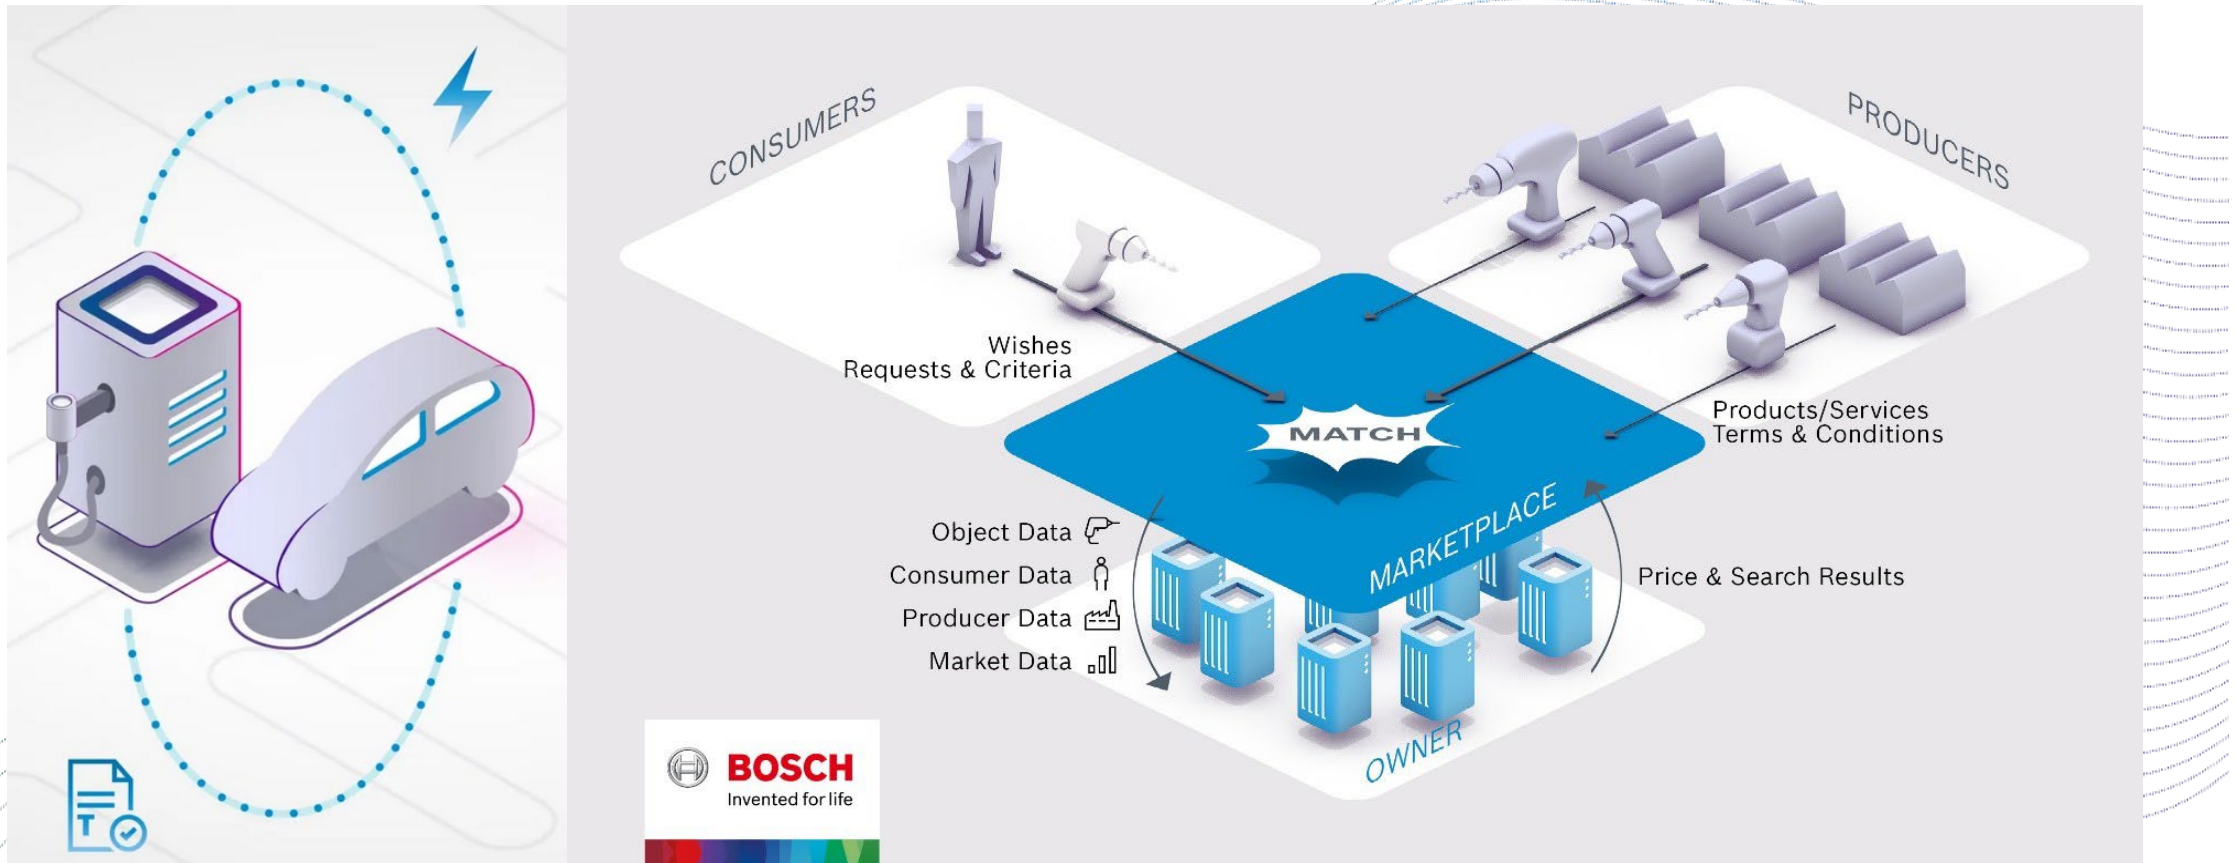

Peter Busch, Product Owner DLT Mobility Bosch
Matthias Buchhorn-Roth, Dataspace Architect, Microsoft

From IoT to the Economy of Things

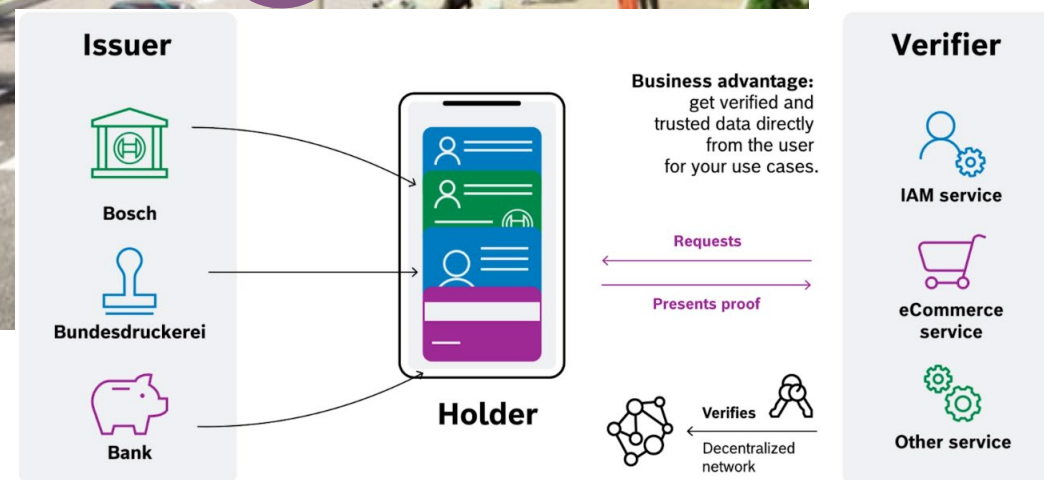

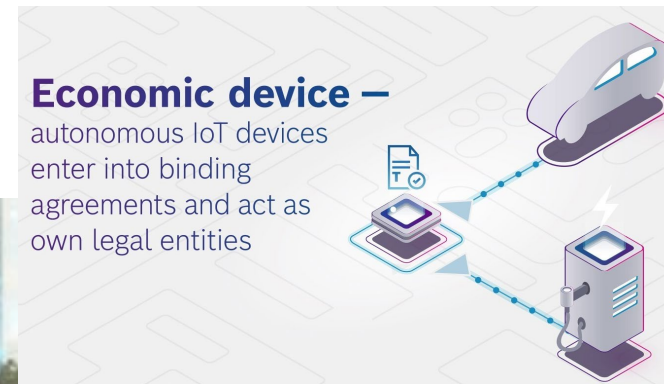

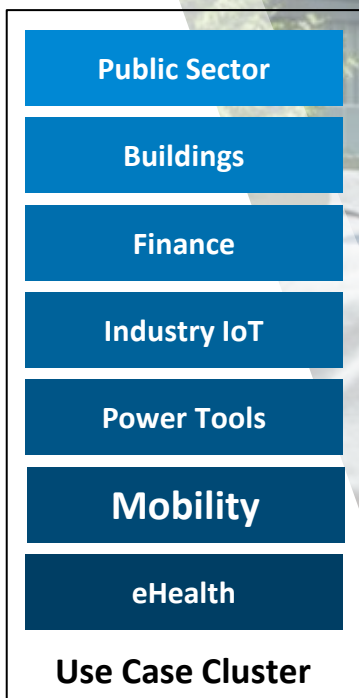

An EoT ecosystem to solve Trust and Market needs

A common platform for an **ecosystem of service providers and apps** with positive impact on society and a **fertile ground for innovation**, ...
... as an **alternative to a centralized platform** to enable more opportunities **without lock-in** in a **coopetition** mode

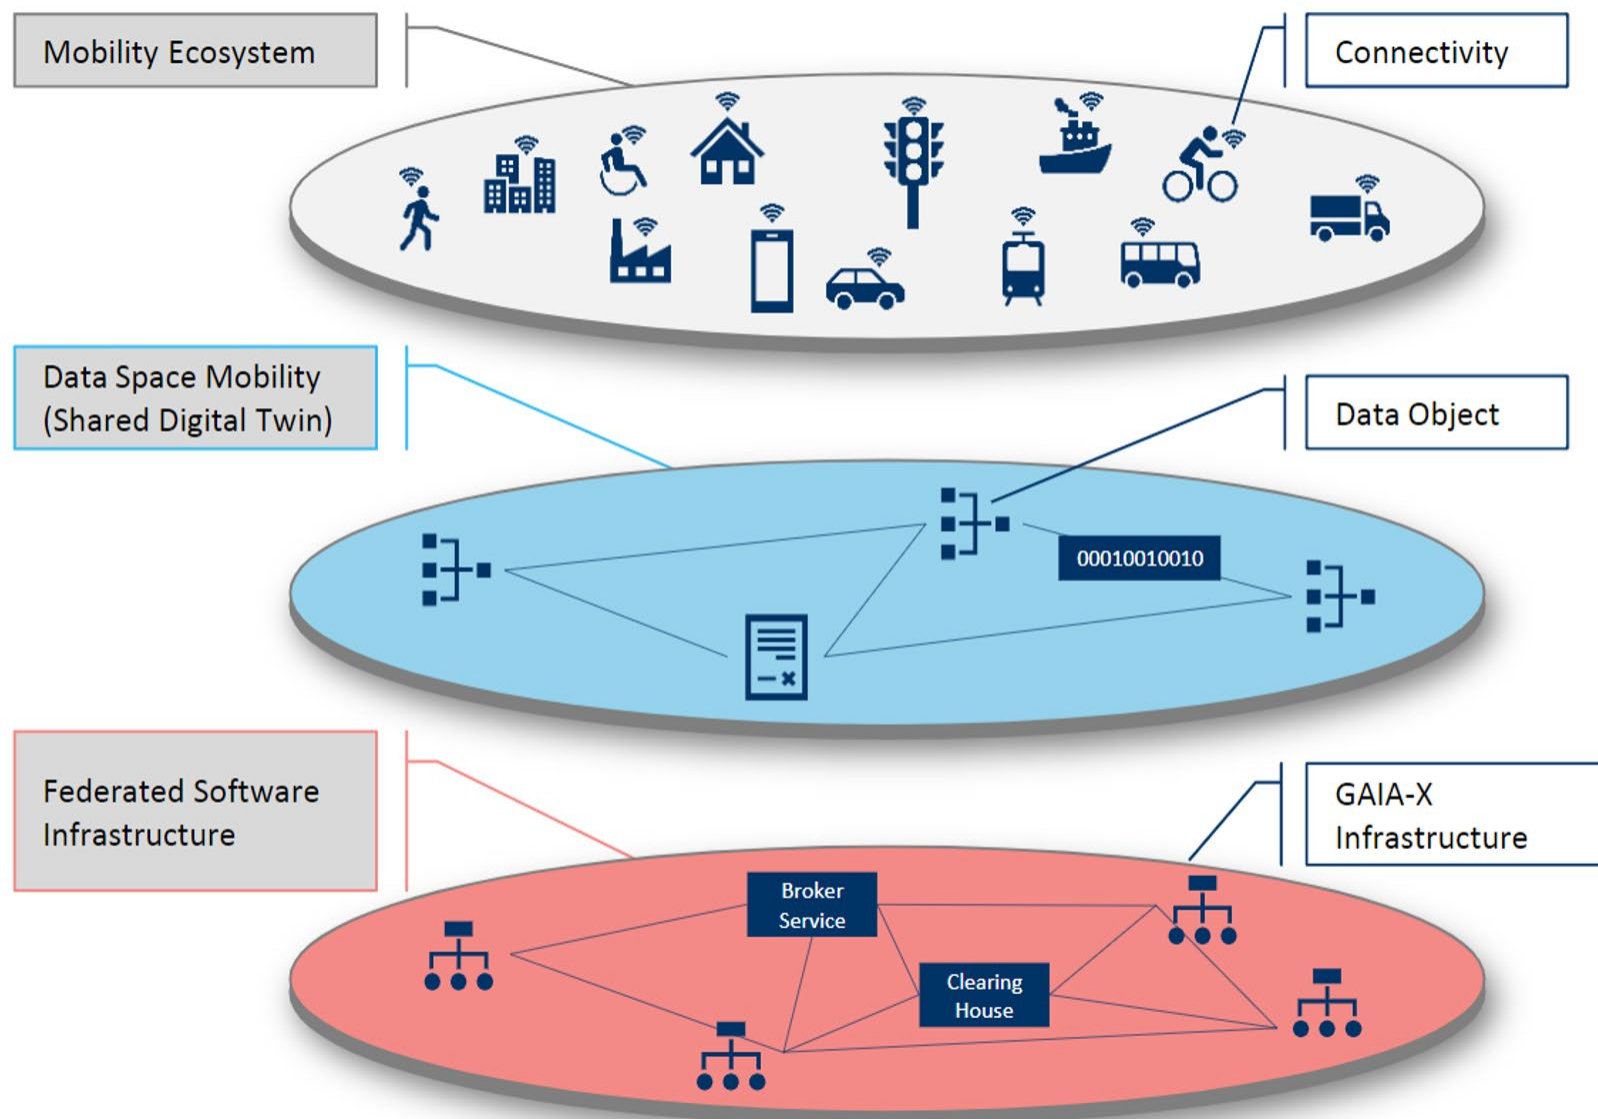

Data Sovereignty by SSI*

Use Cases for Decentralized Identities

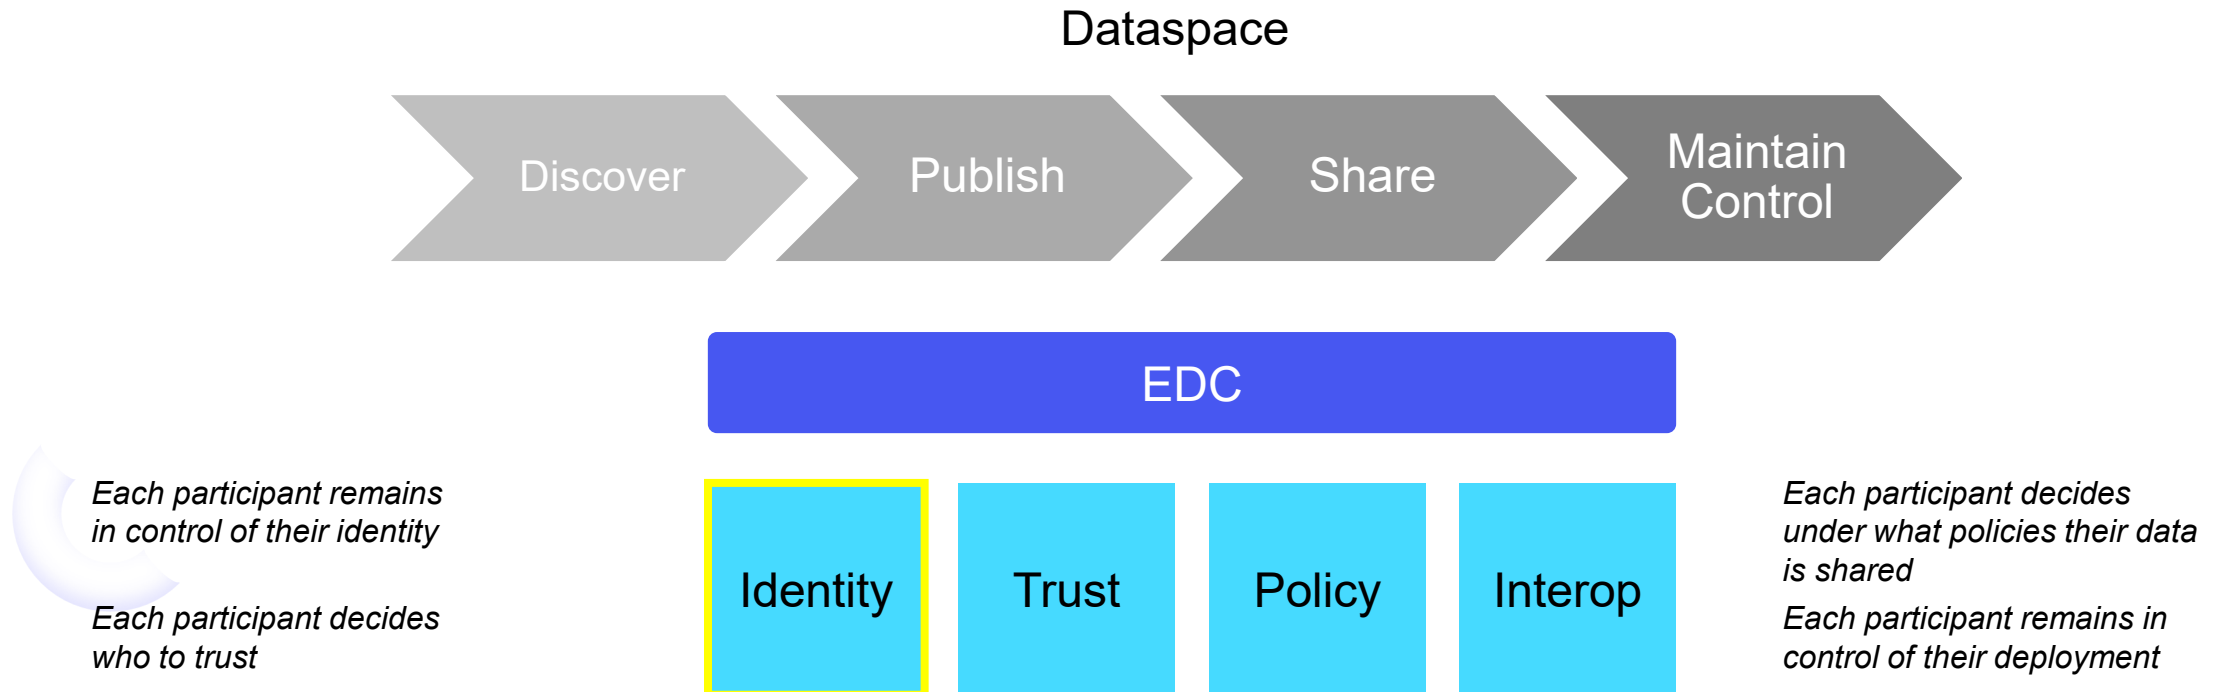

*SSI: Self Sovereign Identity

From IoT to Economy of things

What is a Dataspace?

- A dataspace is a way for organizations to securely share data with other participants.
- Dataspaces are built on *identity*, *trust*, *policy*, and *interoperability*
- Dataspaces enable data cooperation in a multi-cloud federation

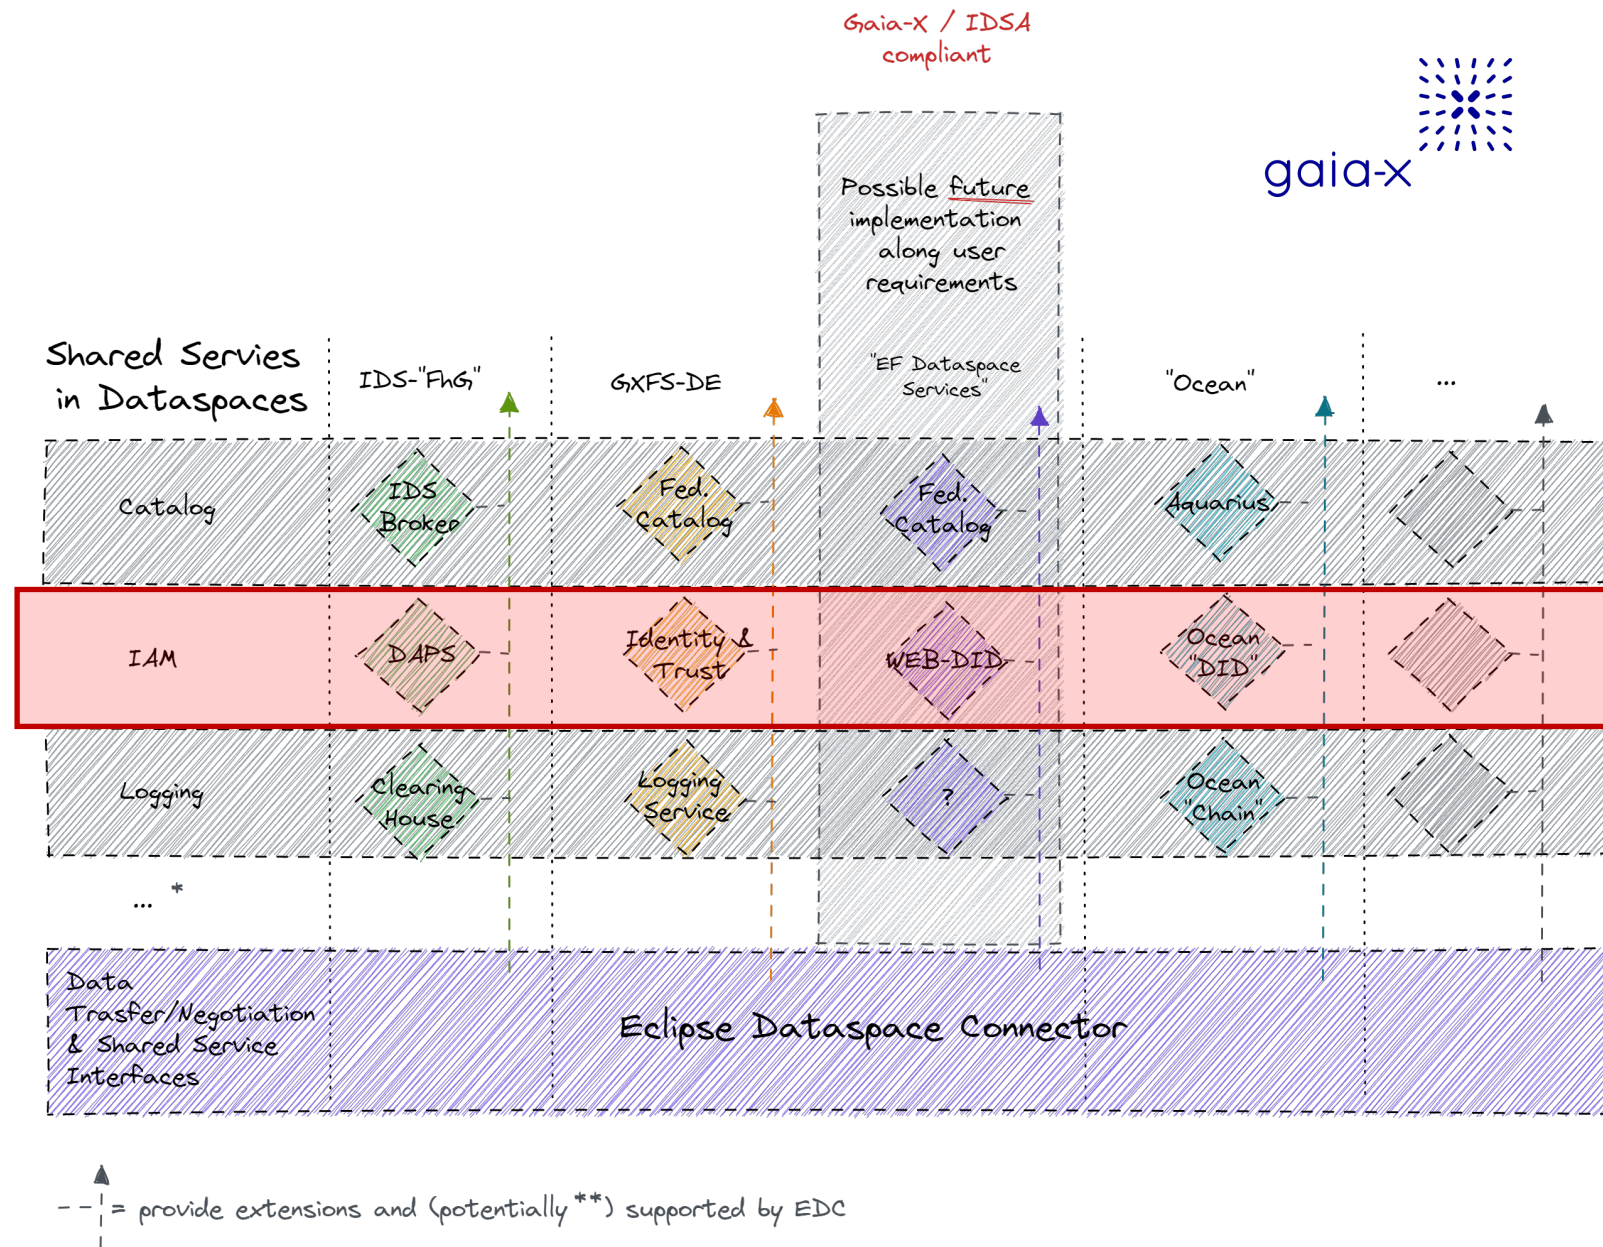

Eclipse Dataspace Connector (EDC)

A reference architecture for gaia-x compliant federation services of **data transfer** and **compliance**

- Reference Implementation of [IDSA RAM](#) 4.0 and [GAIA-X architecture](#)
- Open Source under Apache 2.0 on GitHub
- Free of intellectual property rights
- Used in GAIA-X projects [Catena-X](#), [SafeFBDC](#)
- Modular / Extendable Architecture
- Based on Java 11+

- EDC has a flexible, modular system
- Modules can be exchanged
- Custom modules can be created
- Existing modules can be extended
- Can be fully decentralized or partially centralized

* Examples for other shared services could be the contracting service of GXFS or the AppStore of IDSA

** EDC is committed to support IDSA and Gaia-X based Dataspaces. The support of other specifications depends on contributions to the OSS by other organizations

Thank you!

Peter Busch, Product Owner DLT Mobility Bosch

Matthias Buchhorn-Roth, Dataspace Architect, Microsoft

Gaia-X – Mobility Data Spaces and Citizen Data sharing

Paul Theyskens

MyData Brussels Hub, IMEC and MaaS Alliance Working Group
Technology & Standards Leader

Gaia-X - Mobility Data Spaces and Citizen Data sharing

Paul Theyskens

For fair, sustainable, and prosperous digital society through a human-centric approach to personal data

People get value from their data and set the agenda on how it is used

For **organisations**, the ethical use of data is always the most attractive option

mydata.org/declaration

- 1 **FORMAL → ACTIONABLE RIGHTS**
- 2 **DATA PROTECTION → EMPOWERMENT**
- 3 **CLOSED → OPEN ECOSYSTEMS**

Citizens in Belgium

[tel mee](#) [Praktisch](#) [Straat-O-sfeer](#) [Resultaten](#) [Vragen?](#) [Nieuws](#) [Over Straatvinken](#) [English](#) [Contact](#)

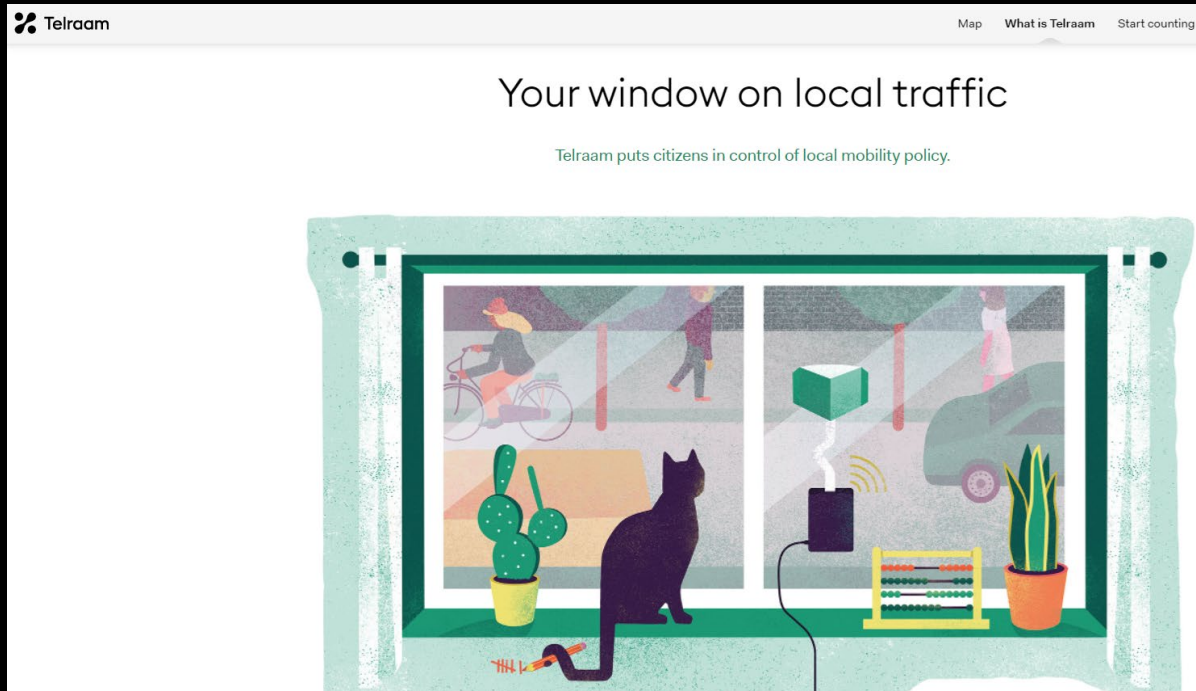

About Straatvinken (EN)

Citizen science project Straatvinken: Straatvinken traffic counts and Straat-O-Sfeer liveability survey

The citizen science project Straatvinken is one of the citizen initiatives in the region of Flanders responding to growing societal concerns on the adverse impacts of traffic-related pollution, lack of green space, safety issues and other challenges related to street liveability. It was initiated as a collaboration between Ringland, a large citizen movement from Antwerp, and the universities of Antwerp and Leuven.

Citizens in Belgium

Privacy and consent first, with ethically sourced data

We prioritize transparency and consent in our products and communications. As a gig worker-owned cooperative, our incentives are serving our driver-members first and foremost.

Track change over time and in response to interventions

Our dataset is longitudinal, allowing you to see historical patterns, predict future trends, and measure impacts from policy or operational interventions.

Multi-platform and comprehensive

Understanding gig work and new mobility really requires being able to see it at the fleet level, across platforms, days, and geographic boundaries.

Known sourcing

It's crucial to know where your information comes from. We don't sell information products built with ambiguous data sources, black box algorithms, or hidden biases. You'll know exactly what you're getting with

Quantitative meets qualitative

We pair granular quantitative analysis with a direct line to the gig workers who generate data, so when you see a pattern that you're interested in learning more about, you can talk directly to drivers and understand the motivations and behaviors behind that pattern.

MyData in the European Data Strategy

MyData is recognized as one of the movements that “promise significant benefits to individuals, including to their health and wellness, better personal finances, reduced environmental footprint, hassle-free access to public and private services and greater oversight and transparency over their personal data.”

Guarantee that the human-centric thinking is embedded in the European data spaces as far as personal data is concerned

Develop further the interoperability of data intermediaries in the context of data spaces

Data Spaces

TEAM DATA SPACES

Teaming up for Data Spaces in Europe

Team Data Spaces commits support to the EU's plan to create European data spaces that realise the full potential of data sharing in the respect of European values.

Data Governance Act – Data Intermediaries

28 ^{Blog}
OCT

MYDATA AND THE EUROPEAN UNION'S LATEST DATA DEVELOPMENTS

The European Union (EU) is a global regulatory powerhouse in the data rights space, with the General Data Protection Regulation (GDPR) being the most well known example. The upcoming [Data Governance Act](#) may be the next globally influential, data-related regulation benefiting citizens at home and abroad. In this blog, MyData Chair, Antti "Jogi" Poikola explains the EU Data Governance Act and how it supports achieving the goals in the [MyData Declaration](#).

MYDATA OPERATORS 2021

17 ^{Blog}
NOV

22 COMPANIES AND ORGANISATIONS RECEIVE THE MYDATA OPERATOR 2021 AWARD

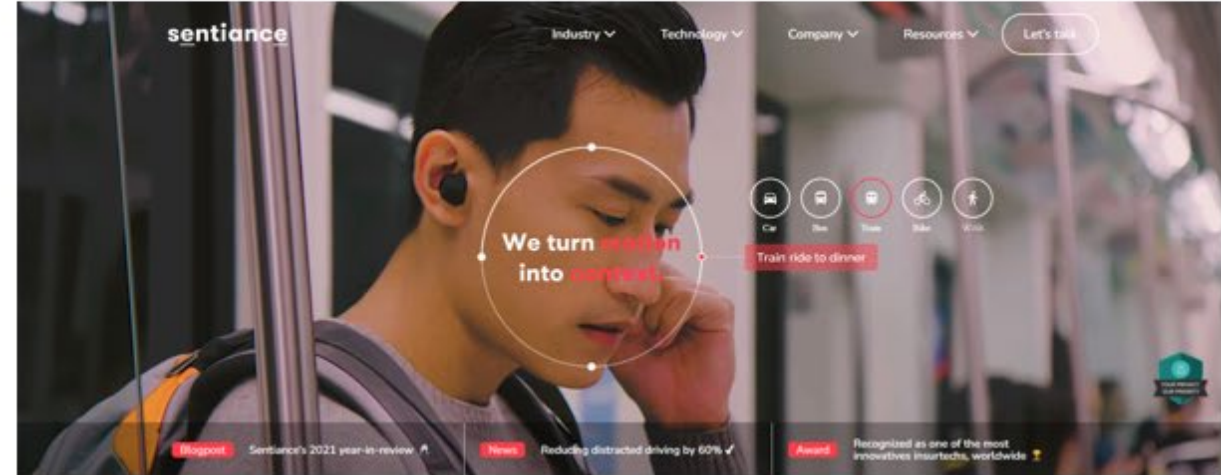

SOME USE CASES EXAMPLES

■ Pedestrian Flow

- **Data** : telco footfall data , smartphone sensor data, mobility apps data, personal digital twin
- road suitability tracking, mobility mode switching prescription, inclusivity scoring, Hoppin Point/eHubs priority construction, safe route , fitness coach, eco mobility scoring and prescription

■ Bike Flow

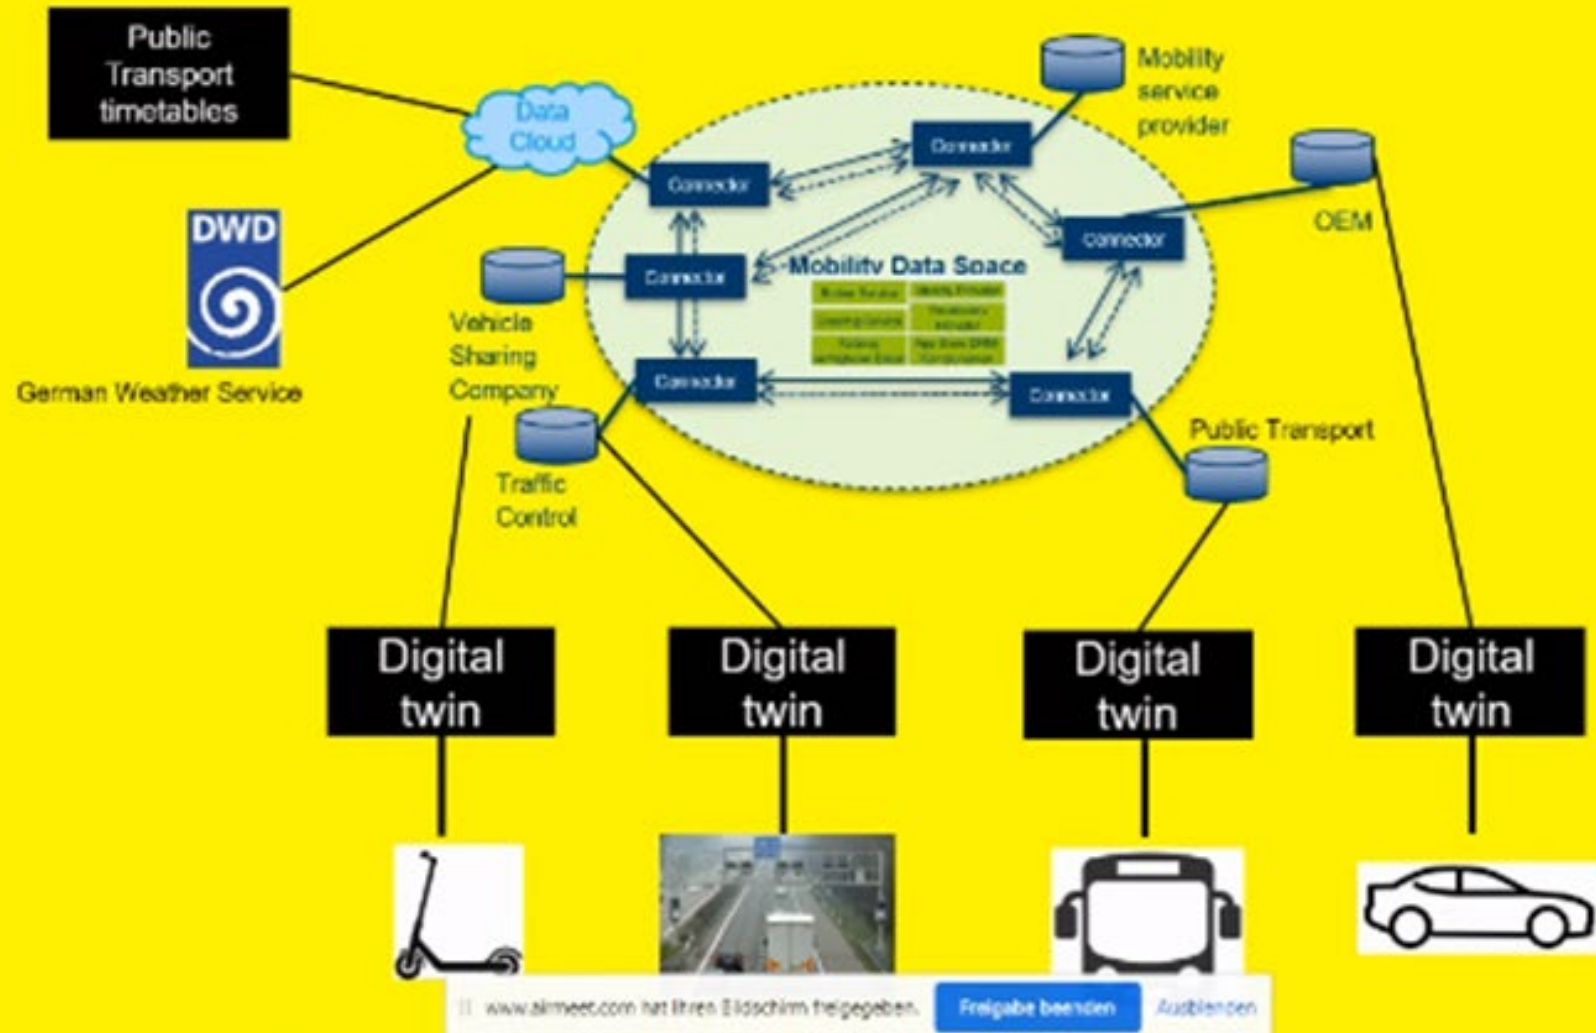

- **Data** : Streamr, Skipr, GBFS, Bike Data Project
- dynamic bikelanes, Bike infra priority setting, weather modeswitching prescriptions

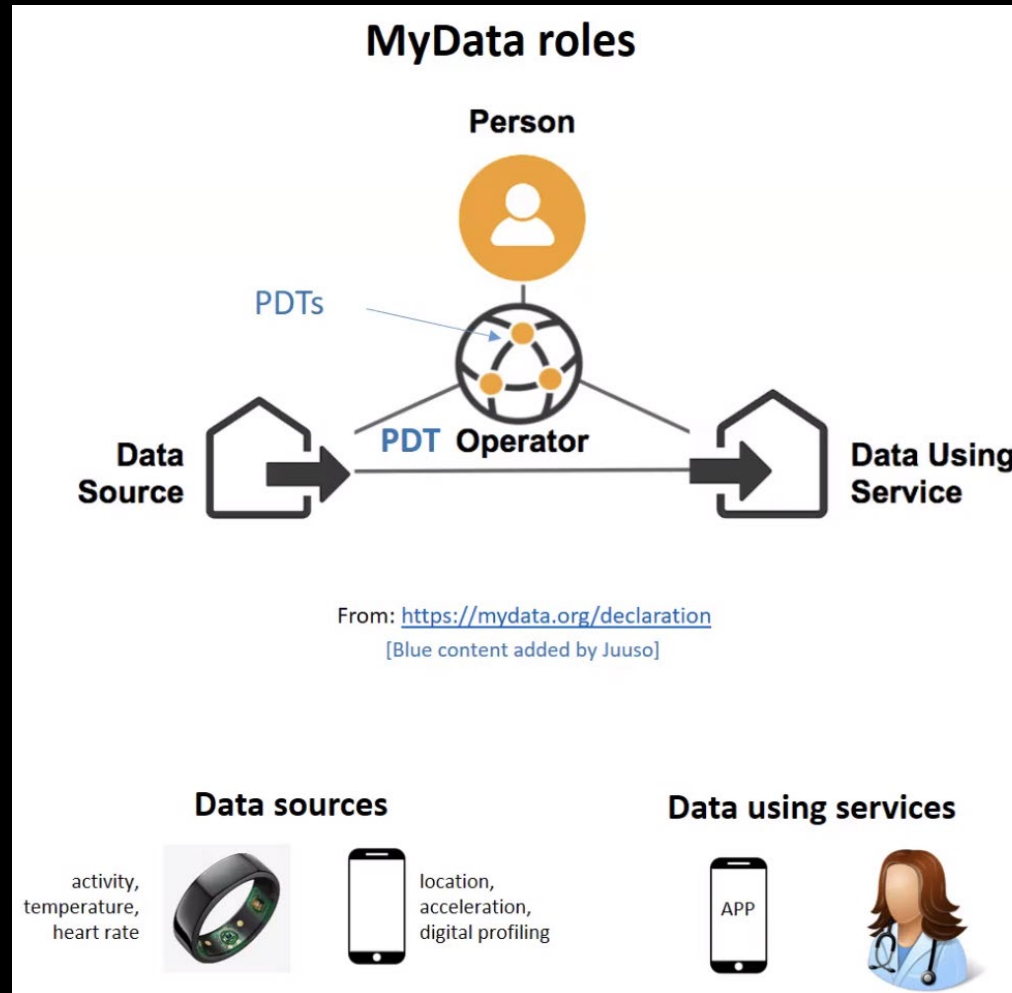

Mobility as a Service

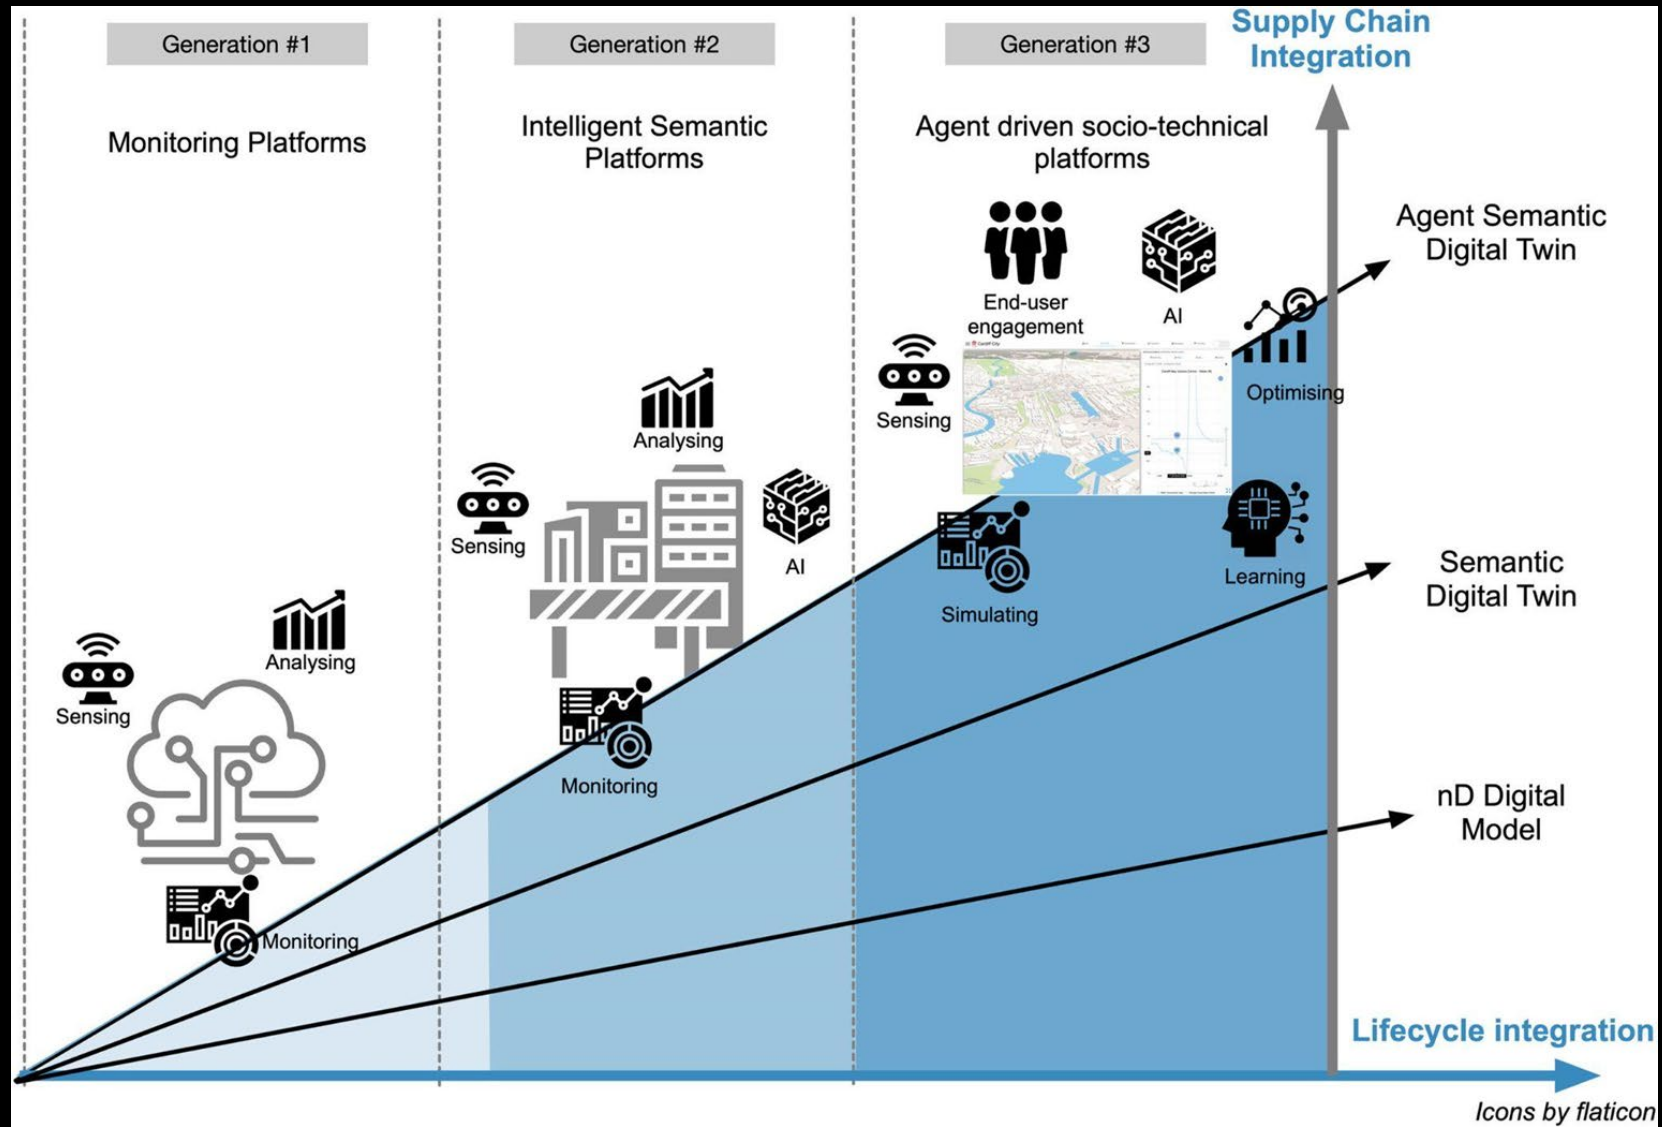

Making Data available

Personal DT operators

Evolution of DT

Chapter 2: Breakout / Panel sessions

#2 Intercity mobility

Moderator: **Dominique Epardeau**

Chairperson of Gaia-X Mobility DSBC and Executive Member of the
Mobility, Transport & Tourism Data Space EONA-X

Speaker: **Ghislain Delabie**

Fabrique des mobilités

Urban Mobility Data Space?

Building French MaaS ecosystem
based on standards and European
cooperation

Gaïa-X Mobility Data Space Event - 19th of May 2022

FABRIQUE

des mobilités

France

Agenda

1. French MaaS ecosystem
2. Standards for MaaS
3. Standards lifecycle analysis
4. Key components of standardisation and a Mobility Data Space
5. How success looks like

[Booster] French MaaS ecosystem

A roadmap powered by policy and technical guidelines

LOM (Law for mobility - 2019) has been pioneering European policy framework for MaaS

National ecosystem co-designing law + current roadmap + best-practices to scale up

Standards best suited to stakeholders

Strong involvement of stakeholders in **designing standards that serve the ecosystem.**

Building on what works EU-wide and contributing with new approaches

Building digital infrastructure for MaaS

Promising digital infrastructures have been identified and are nurtured.

They will be supported by **public-private funding to scale up once they demonstrated their potential real-life** (and with community support)

E.g: Local/national federation of mobility accounts and personal Data, POI/mapping assets, Mobility Data Hub, Gaïa-X, open gateway for MaaS integration

Investing in digital and decarbonized mobility

France 2030 strategy and financing should **actively support players and projects that implement the roadmap, use standards and digital infrastructures** for MaaS

=> Wait (a few weeks) and see

[Booster] Standards for MaaS

Standards best suited to stakeholders

Original developments to the EU ecosystem

A standard for User Management, SSO and GDPR-compliant Data-sharing in Mobility (S2 2022)

A popular standard for integrating ridesharing in MaaS (already 50 PTAs implementing it)

Contributing to EU momentum

CEN03 norm for PT booking API

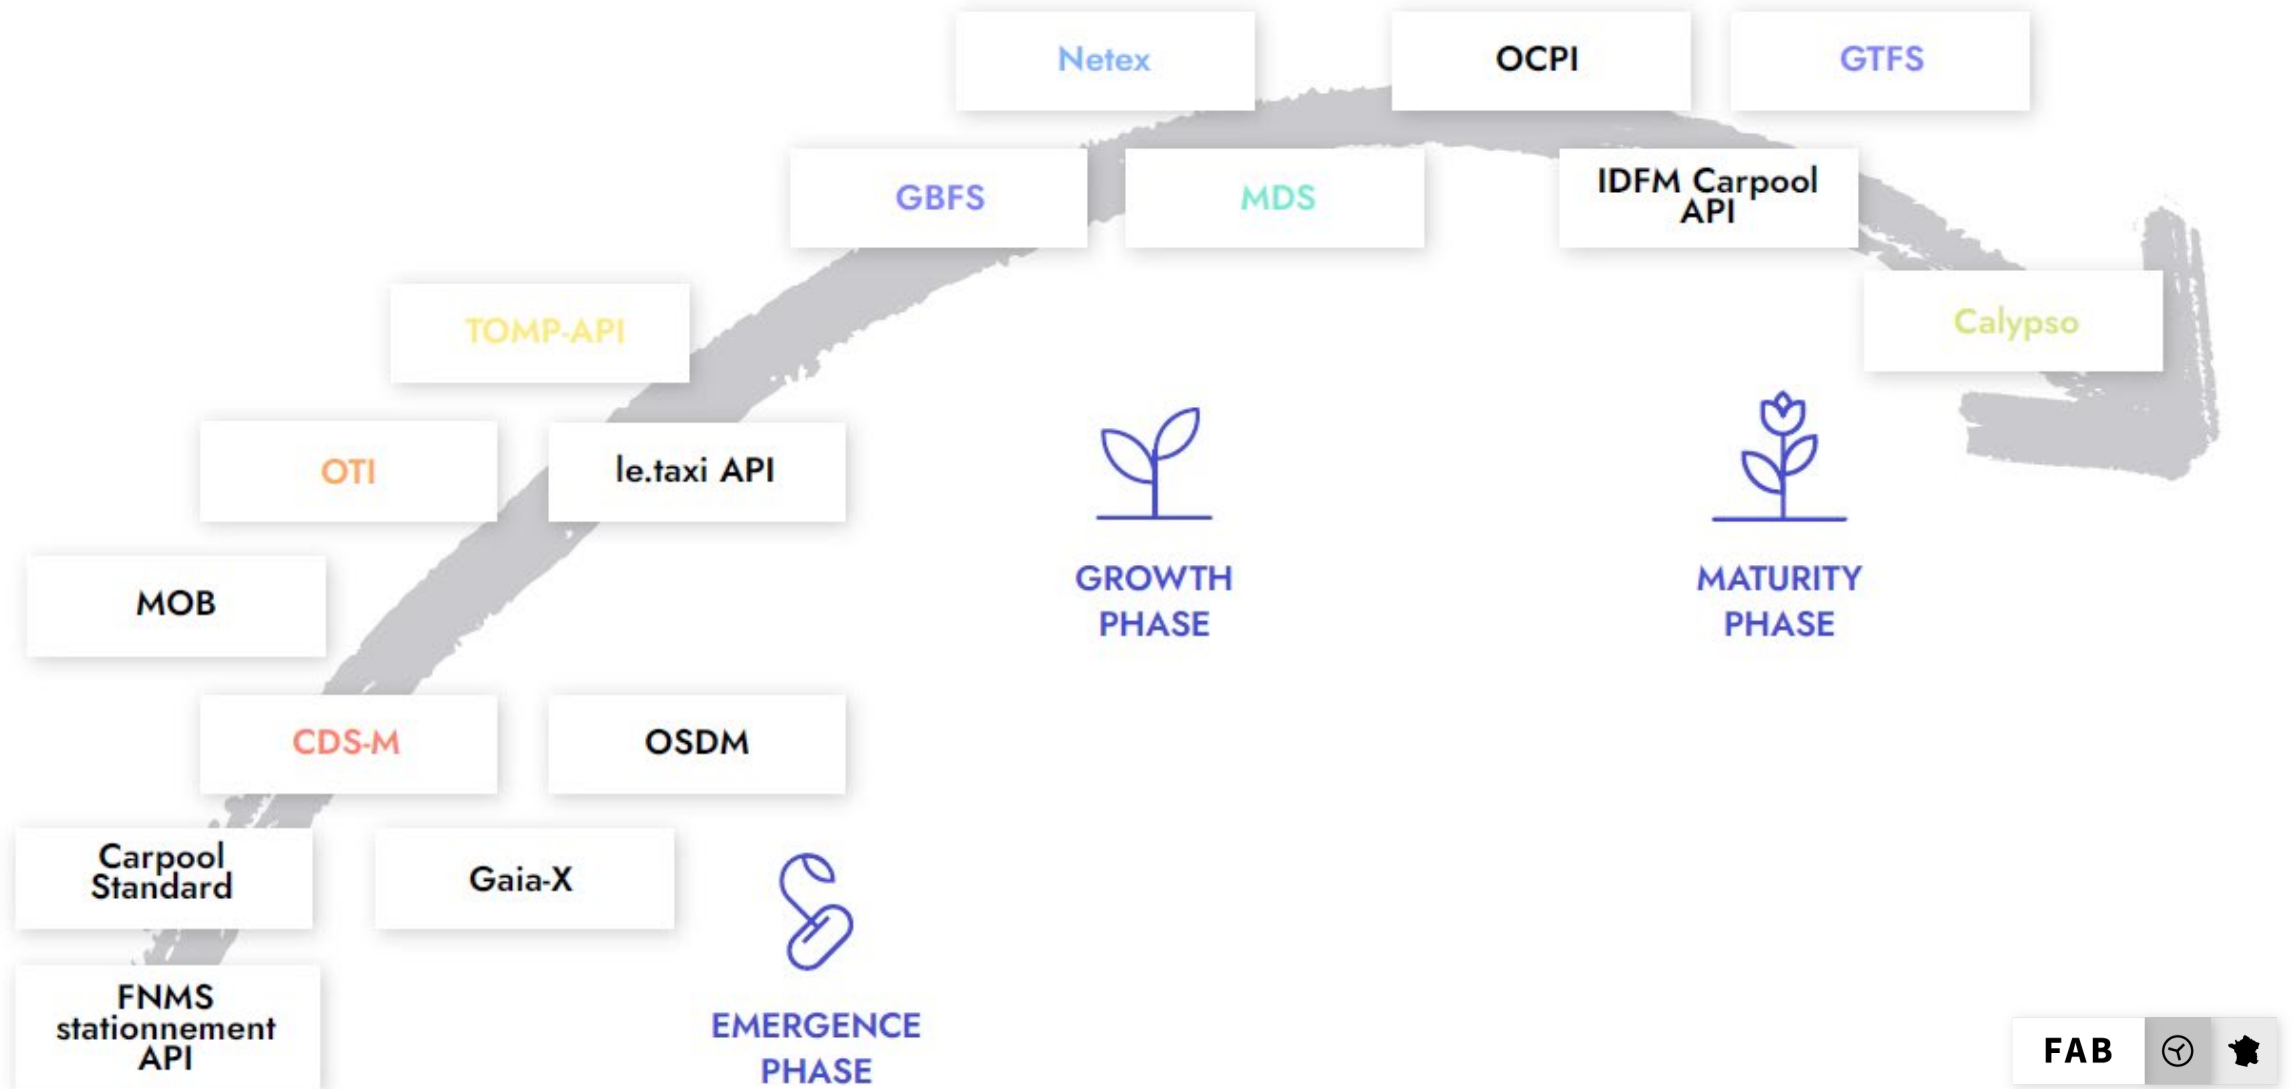

TOMP-API for new mobility (bike/scooter/car sharing), with French extensions/contributions

A foundation for MaaS: passenger information Data

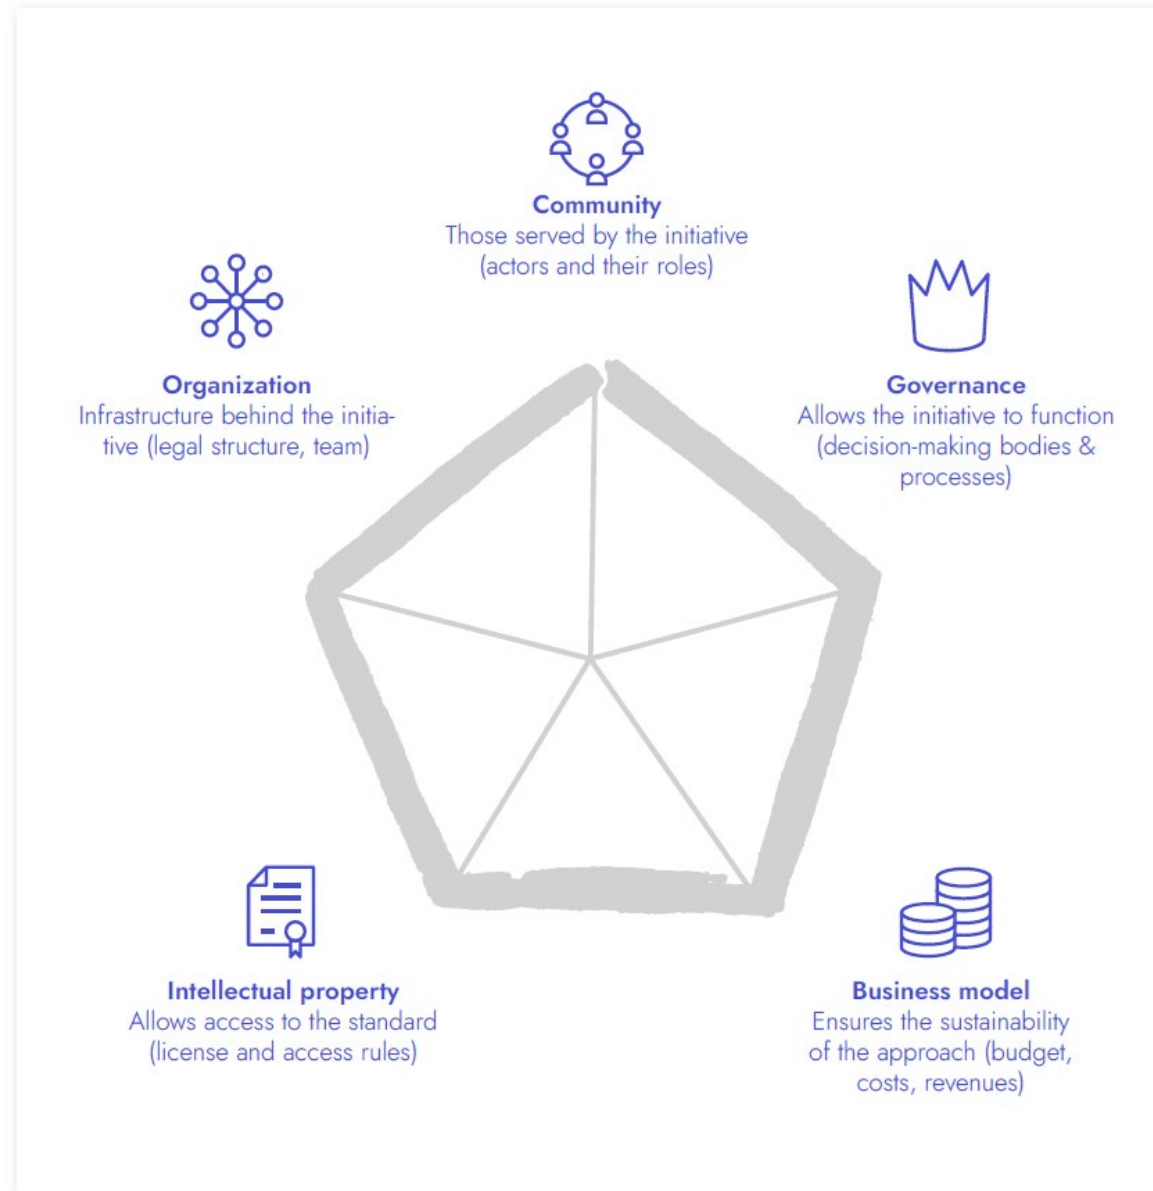

EU standards when relevant (mainly Public Transport):
Netex/Transmodel family

Open standards very popular, with low EU-support: GTFS, GBFS

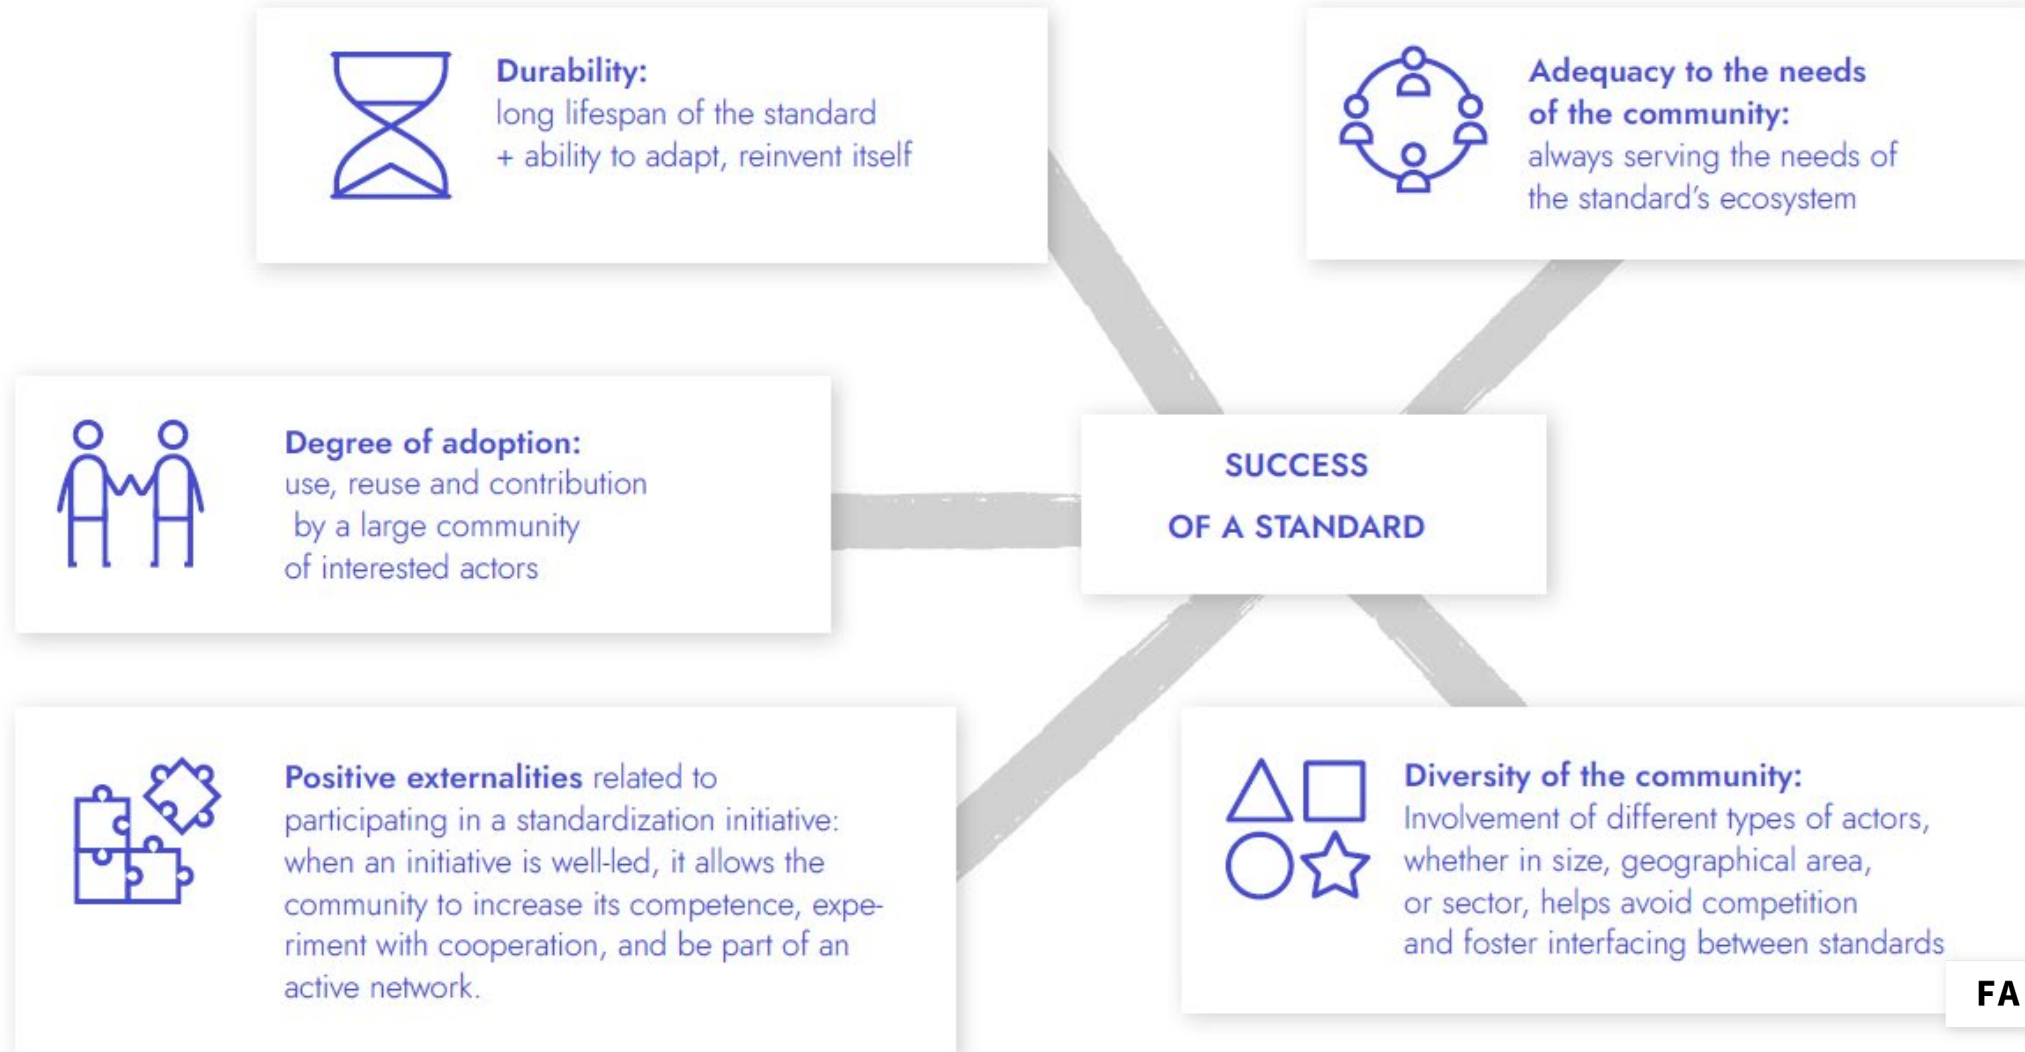

[Benchmark] Standards lifecycle analysis

[Key components] Designing standards and a Mobility Data Space

[Success] of standards and Mobility Data Space for MaaS

Merci - Thanks

Our [report on MSDM standards & governance](#)

Chapter 2: Breakout / Panel sessions

#3 Enabler Data Standards

Moderators: Harmen van der Kooij and Jelle Hoedemaekers

Speaker: Michael Karl, Head of Safety-Critical Data
Infrastructures - Institute for AI Safety & Security - DLR

- One of the most **valuable** business aspects
- Data is primarily **created at the edge**
- Data as a **single entity** is not that useful

Next step

Interconnect Data Spaces

- Enable **work across** organizational structures
- **Collaboration**
- Great concept for business segments with **large number of participants**

Flagship Projects
GAIA-X, CATENA-X

- Data is **decentral & heterogeneous**
- Applications are **decentral**
- **Special requirements** when using highly decentralized and heterogeneous data

Conclusion

Standards leverage collaborative handling of data

Data is specific

- **Data is different** as the organization who gathers it
- **Bias**
- Related to **semantics**

Requirement

Have good data

Example: Artificial Intelligence (AI)

- New **paradigm**: no specific instruction, but (a lot of) examples
- **Correlation** vs. causality
- **Black-Box** (implementation based on data samples)

Requirement

Have good & representative data

- How to **harmonize** heterogeneous data?
- How to measure **quality** in distributed ecosystems?
- How to ensure **safety & security** in decentral scenarios?

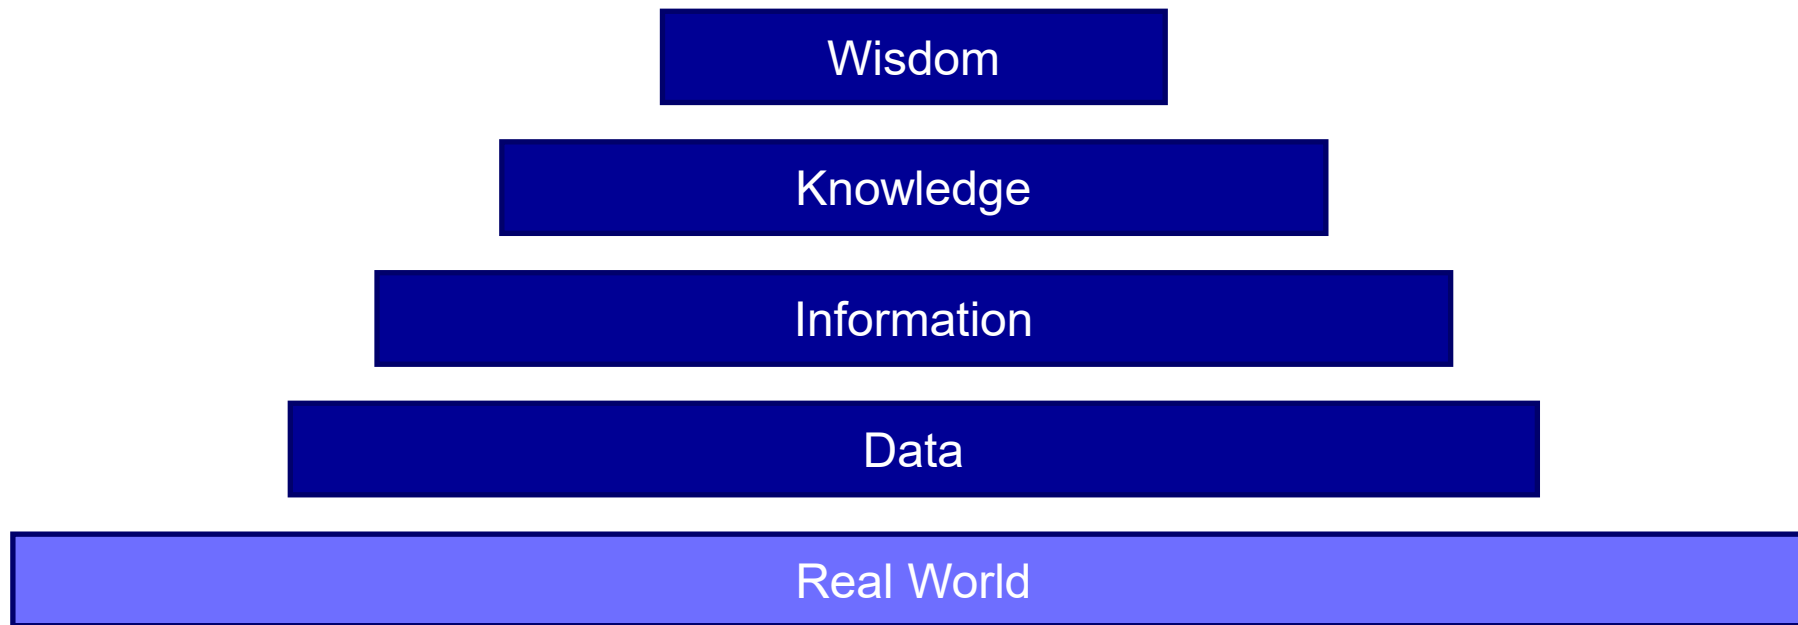

Requirement

Make the life of data transparent

- Data **Provenance**
- Data **Taxonomy**
- Data **Ontologies**

Goal

Allow a deeper understanding of data

Better, safer, and more secure applications.

Thank you!

Michael Karl
michael.karl@dlr.de

Chapter 2: Breakout / Panel sessions

#4 Enabler AI

Moderators: Harmen van der Kooij and Jelle Hoedemaekers

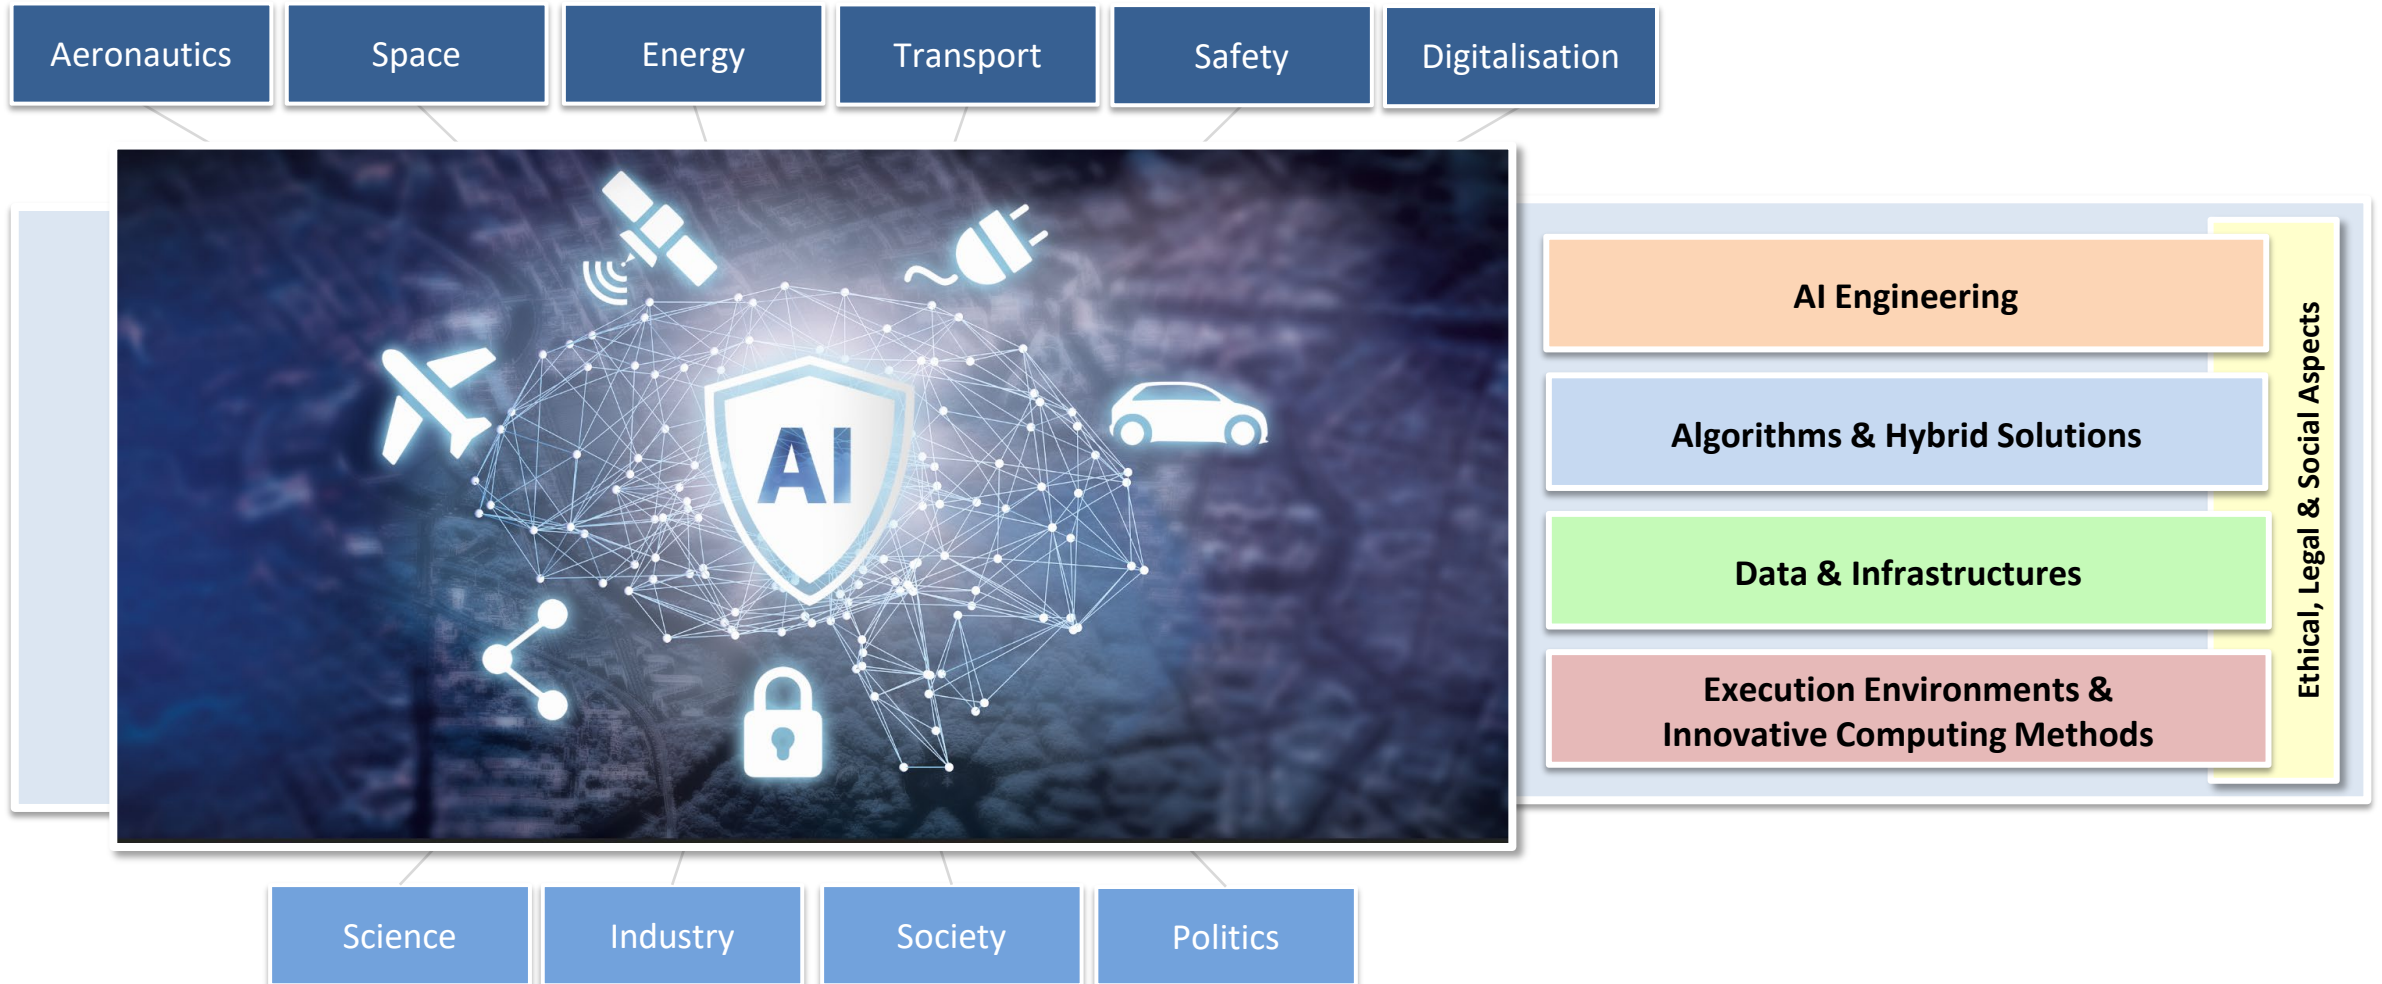

Speaker: Dr. Arne Raulf

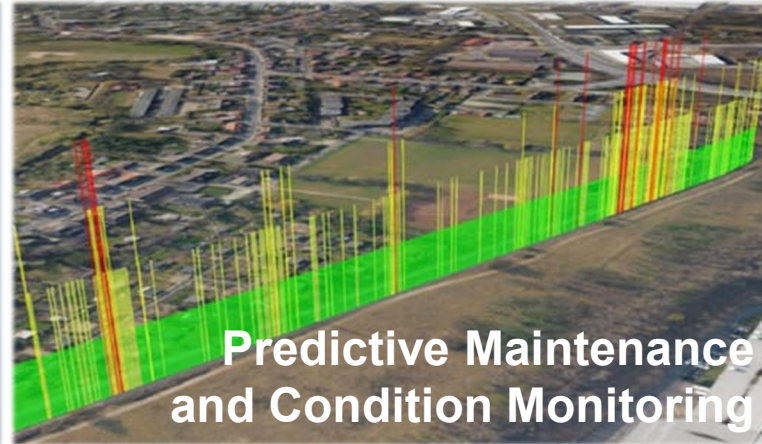

Head of Department *Algorithms and Hybrid Solutions*, Institute
for AI Safety

Institute for AI Safety & Security

Sankt Augustin and Ulm // www.dlr.de/ki

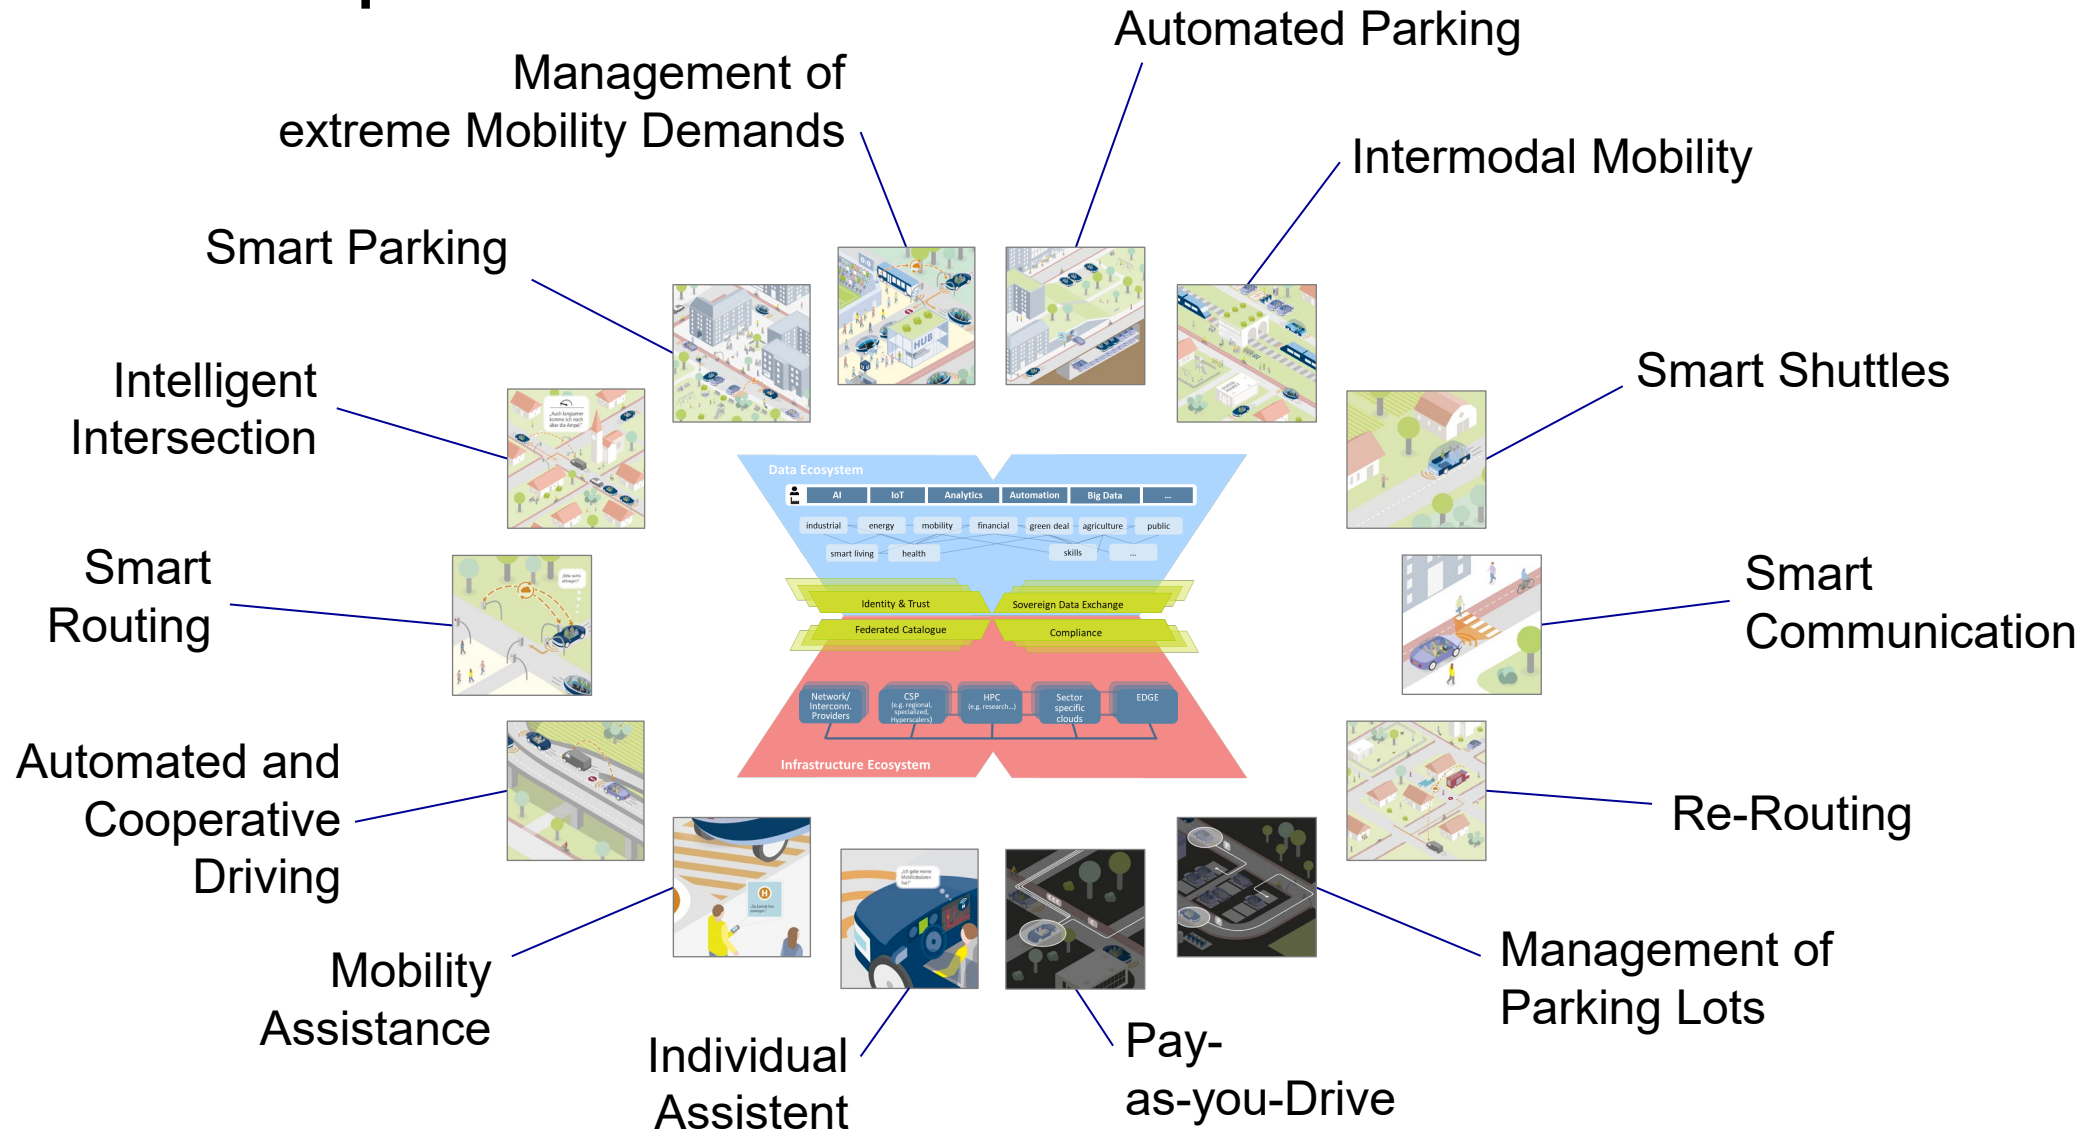

AI
must be capable
to meet the requirements
of safety-critical applications
and also secure against
attacks and misuse.
