

CDE Notary

Solution Overview

CDE Notary transforms unstructured documents into signed, verifiable and machine-readable evidence. It standardises compliance artefacts, secures their provenance, and automates the creation of attestations that can be consumed across catalogues, audits or data spaces.

Key Benefits

- Transforms evidence into verifiable credentials, directly supporting the Gaia-X identity and trust framework (verifiable credentials, signed artefacts).
- Provides cryptographic assurance on provenance and integrity, strengthening Gaia-X's requirements for transparent and trustworthy data-exchange.
- Standardises compliance artefacts, making them portable across catalogues, audits, Gaia-X Federated Catalogues and Conformity Services.
- Automates evidence re-use across multiple certifications or data spaces, reducing duplication and manual work.
- Enables audit-ready documentation, improving both internal governance and Gaia-X-aligned conformity assessments.

Relation to Gaia-X

CDE Notary addresses the Gaia-X requirements for verifiable credentials, trustworthy evidence and provenance-tracking within (federated) data ecosystems. By producing signed artefacts that can be exchanged, it supports the transparent, interoperable and sovereign data-infrastructure ethos of Gaia-X.
