

## CDE Cataloguing

### Solution Overview

The **Cataloguing Service** from Cloud Data Engine provides a searchable, publicly accessible registry of services, offerings and proofs of conformity. It allows cloud providers to publish their compliance posture and enables data space participants to discover trustworthy, EU-aligned service components.

In particular, CDE operates the **CISPE Catalogue** which is the reference catalogue of Cloud Services Providers in Europe, which includes already conformance to Gaia-X Labels Level 1, 2 and 3.

### Key Benefits

- Boosts service visibility and discoverability in federated ecosystems by providing a searchable registry aligned with Gaia-X Catalogue specifications.
- Simplifies service qualification thanks to integrated proofs of conformity, helping CSPs demonstrate compliance with Gaia-X rules and policies.
- Enhances cross-provider operational and contractual interoperability, ensuring service descriptions follow standardised metadata structures inspired by Gaia-X service definitions.
- Improves trust and transparency, offering authenticated, up-to-date service records that work alongside the vision implemented by the GXDCH.
- Facilitates ecosystem building, enabling organisations to find compliant components for Gaia-X-aligned data spaces or federations.

### Relation to Gaia-X

The **CDE Cataloguing Service** effectively implements Gaia-X's vision of a "global glossary", "digital clearing house"-consistent and standardised registry of services and trusted partners. By publishing compliant services in a searchable format, it strengthens interoperability, discoverability and trust — core elements of the Gaia-X specification for federated ecosystems.
