

Poseido Gaia-X Go extension

Solution Overview

Gaia-X-Go from Posedio is a package for the Go programming language that help to accelerate the development of Go applications that natively interact with the GXDCH.

Key Capabilities

- Issuance for Verifiable Credentials and Verifiable Presentations
- Gaia-X compliance issuance helper and validation
- Easy config for different Gaia-X architectures (Tagus, Loire) and GXDCH providers
- Integration tests for example implementations and usage
- Fully open-source with an enterprise friendly license

Relation to Gaia-X

This Go package supports the creation, validation, and verification of VCs and VPs in the context of Gaia-X compliance. It thus allows for easy integration of the interaction with GXDCHs and its automation capabilities.
