## **DE-CIX to share €122 million for European digital ecosystem**

Germany's Federal Ministry of Economics is supporting DE-CIX's leadership of a consortium to build a European digital ecosystem with a €122 million subsidy.

The Gaia-X digital ecosystem is designed to support critical applications and be separate from the public internet. Though the consortium is called Gaia-X, the project itself is called Tellus.

## **DE-CIX receives subsidy from the German Federal Ministry of Economics: Development of GAIA-X compliant interconnection platform in the "TELLUS" project**

Frankfurt am Main, 02 December 2021. DE-CIX, the world's leading operator of Internet Exchanges and interconnection, has received financial support for the TELLUS project as part of the funding competition "Innovative and Practical Applications and Data Spaces in the GAIA-X Digital Ecosystem (GAIA-X Funding Competition)" of the German Federal Ministry for Economic Affairs and Energy (BMWi). The goal of TELLUS is to provide a Gaia-X network infrastructure for critical applications through a Gaia-X compliant interconnection platform. For the first batch of approvals, which will fund a total of 11 winning consortia, the BMWi is expected to provide funding totaling approximately 122 million Euro.

## **Gaia-X is geen panacee voor soevereiniteit**

De pogingen om niet-Europese partijen uit te sluiten bij Gaia-X is een onverstandige en onwenselijke strategie

Vrijwel al onze data staat tegenwoordig in de cloud. De tijd van servers en bedrijfssoftware in de kelder of de meterkast ligt alweer ver achter ons. Moderne toepassingen voor op kantoor, maar ook om auto's te produceren of een ziekenhuis te laten functioneren, bestaan uit een combinatie van IoT of desktops, verwerking en opslag in datacenters. Die groei zet de komende jaren nog fors door en de cloud gaat een steeds belangrijkere rol spelen in de economie.

## **Gaia-X is no panacea for sovereignty**

Efforts to exclude non-European parties from Gaia-X is an unwise and undesirable strategy

Virtually all of our data is in the cloud today. The days of servers and business software in the basement or the meter cupboard are long gone. Modern applications for the office, but also for manufacturing cars or running a hospital, consist of a combination of IoT or desktops, processing and storage in data centers. This growth will continue in the coming years and the cloud will play an increasingly important role in the economy.

## **Viettel And Rapid.Space Partner To Deliver Strategic Autonomy For 5G Networks In Vietnam And South-East Asia**

The partnership will utilize fully virtualized radio access networks based on common off-the-shelf (COTS) hardware

Paris (GLOBE NEWSWIRE) - Rapid.Space, an alternative cloud provider, has announced its partnership with Viettel, a Vietnamese telecom company, to deliver strategic autonomy for 5G networks in Vietnam and South-East Asia. Rapid.Space will provide its "SimpleRAN" solution to operate and automate the deployment of fully virtualized 4G/5G networks.

## **Connecting the global data dots**

Open science depends on trusted tools and rules. Now, the technological, legal and political pieces may finally be falling into place. That was the view of the speakers in a recent Science | Business webinar entitled: Mandatory data sharing versus data sovereignty.

In a generally upbeat discussion, representatives of the OECD, the European Commission, academia and industry sounded an optimistic note about the future of data flows between different actors in the economy and different regions of the world, paving the way for faster research and innovation.

## **Digitale soevereiniteit: zo blijven bits binnen Europa**

Digitale soevereiniteit wordt in het tijdperk van big data en de cloud steeds belangrijker. Maar in de praktijk is voor veel bedrijven niet altijd duidelijk wat er met in de cloud opgeslagen data gebeurt, of onder welke regels die überhaupt valt. Veelal is die immers opgeslagen bij Amerikaanse cloudgrootmachten. Diverse Europese initiatieven op het gebied van datadeling en de cloud moeten daar verandering in brengen.

## **Digital sovereignty: this is how bits stay within Europe**

Digital sovereignty is becoming increasingly important in the age of big data and the cloud. But in practice, for many companies it is not always clear what happens to data stored in the cloud, or under what rules it falls. After all, it is often stored with American cloud superpowers. Various European initiatives in the field of data sharing and the cloud should change this.
